In addition to the course delivery of A-level Economics, the department is pleased to offer you the following as potential extra-curricular activities:

- The Young Enterprise Company Programme
- The Royal Economic Society Essay Competition
- Online Student Investor Challenges
- Other relevant extra-curricular opportunities as they become available

The specification is split into two main sections; the first introduces microeconomic issues and the second section covers mainly macroeconomic issues. However, economic issues and problems often contain both a microeconomic and macroeconomic dimension.

That is why students will be assessed through three examination papers. The first paper will examine mainly microeconomic topics, but macroeconomic principles may enrich a student's response to some questions. Similarly, the second paper will examine mainly macroeconomic topics but may draw on microeconomic principles. The third paper will include topics from both sections of the specification and students, particularly when answering questions linked to the case study, will need to recognise when it is appropriate to use microeconomic and/or macroeconomic models.

Students will need to be able to make relevant calculations from economic data and be able to interpret data presented in the form of index numbers as well as the construction and use of graphs and the application of statistical measures such as the mean, median and relevant quantiles.

Perhaps most importantly, students will explore current issues facing society and the policy options available to address them. They will be assessed on their ability to use both quantitative and qualitative evidence to critically analyse arguments and to support judgments relating to these economic issues and problems.

Students will acquire a good knowledge of real-world trends and major developments in the economy which have taken place in recent years and also have an awareness of earlier events where this helps to inform a longer-term perspective.
