

*In the world of work, the importance of Maths is unquestionable. For example, it is the key to science and engineering; it is indispensable in commerce.*

**Are you interested in:**

- problem solving
- logic
- using algebra

**Leading to a career in:**

- accounting
- engineering
- finance
- teaching

**Teacher to contact:**

Mr D Parro

**Exam Board:** Edexcel

## Further Maths A-level

A-level Further Maths aims to improve your knowledge and understanding of maths and its uses in the real world. You will develop your skills to reason logically, comprehend mathematical arguments and recognise how different situations can be represented mathematically.

If you are interested in studying Maths or any Sciences at university, then Further Maths is an option to consider. The Further Maths course is an additional A-level in Maths.

Over the two years, you will study a mixture of pure and applied maths topics. At the end of the course you will sit four exams each worth 25%. Two are pure maths modules and the other two are applied modules.

Further Maths is taught as a twilight session and is an addition to the three A-levels you opt to enrol in. The lessons are held twice a week, relying on independent study time to practice the concepts covered in lessons.
